Understanding The Mind Set & Attitudes of College Bound Students (and how that can translate into student success at college)

Presenters: Katrina Delgrosso, College Ave & Harlan Cohen, Author & Keynote speaker
Enrollment trends indicate the number of high school graduates is expected to peak soon, with a period of enrollment decline expected through 2037. More than ever, it is important to understand and protect students to encourage enrollment, retention, and graduation. High schools do a great job getting students into college; however, the majority of students are not equipped to navigate many of the social, emotional, physical, financial, and academic changes. With fewer years to practice their social skills due to COVID, students are even less equipped to make this change. The data indicate involved students have a better chance of persisting and graduating, but many students lack the life skills and preparation to find their connection and community once they arrive on campus. A student who can't find their people and places on campus is an at-risk student. This session will address how to help students prepare, plan, and successfully navigate the transition to college and life beyond college. This includes the financial transition and all other aspects that contribute to college success. The panel will rely on the extensive years of experience, exposure, and direct relationships with vast and broad populations of college bound high school students.
